Hi, I own 3 Electric Vehicles and love them! I support reestablishing state NEVI funding.

My EV's help keep the air we all breath clean because I fuel them from my residential rooftop solar panels. EV's are better than gas for dozens of reasons. I'd like to see the EV surcharge reduced, while adding a reasonable fee to all passenger vehicles, (including those that pollute by burning petroleum). We should be supporting, not penalizing, those who drive an EV to minimize transportation pollution and the accompanying rise in billion dollar weather disasters caused by that pollution.

They are so much more fun to drive too!

Thanks for considering my thoughts.
